SUMMARY

Machine Learning Engineer with experience designing and deploying end-to-end ML pipelines for NLP, Computer Vision, and tabular data. Skilled in managing the full lifecycle of AI products, from addressing class imbalance with SMOTE to production deployment on Render and Railway.

EDUCATION

Major in Artificial Intelligence

Indian Institute of Technology (IIT), Ropar

Certificate : [View Certificate](#)

Aug 2024 – Feb 2026

Ropar, Punjab

SKILLS

- **Language :** Python
- **ML/DL :** PyTorch • TensorFlow • scikit-learn • XGBoost • LightGBM • SMOTE • Pandas • NumPy
- **NLP & CV:** spaCy • NLTK • OpenCV • Transformers (HuggingFace) • TF-IDF
- **Deployment :** Flask • Django • Render • Railway • Docker (basic)

PROJECTS

WriteFusion AI — Python | TensorFlow | Flask | NLP | Transformers

• [Live](#) | [GitHub](#)

- Designed and trained a GPT-style decoder-only Transformer LM from scratch (causal self-attention, 2 layers, 4 heads, 3.4M parameters) on a self-cleaned 2.7M-word, 860K-sentence English corpus.
- Architected and deployed a production Flask REST API (Gunicorn + Render) serving real-time next-word prediction, multi-strategy text generation, and perplexity scoring.
- Built a full interactive frontend from scratch — live ghost-text prediction, attention-weight visualization, and 8 configurable decoding strategies — end-to-end ownership from data pipeline to deployed product.

MindScan — Teen Depression Risk Predictor | Python | Django | XGBoost | SMOTE | scikit-learn • [Live](#) | [GitHub](#)

- Tackled severe class imbalance (~2.6% positive rate in 1,200 records) using SMOTE; optimized for Recall & F1 over raw accuracy — essential for clinical ML.
- Evaluated multiple classifiers (Logistic Regression, Random Forest, XGBoost); selected XGBoost for best F1 on minority class.
- Full production deployment on Railway with real-time inference and personalized risk recommendations.

AI Symptom Checker — Python | Flask | Scikit-learn | NLP

• [Live](#) | [GitHub](#)

- Developed a disease prediction app, achieving 92% accuracy on benchmark data.
- Deployed the Flask app, tested successfully by 100+ users for real-time predictions.
- Designed a responsive UI that reduced average query time by 40%.

WORK EXPERIENCE

AI Developer Intern – ElevateLab • [Link](#)

Nov 2024 – Feb 2025

- Built and deployed end-to-end ML pipelines (NLP & CV), improving accuracy by 20% and inference speed by 30%.
- Integrated models into 2+ web apps, boosting user engagement by 40%.
- Automated data workflows and collaborated with teams, cutting deployment cycle time by 25%.

CERTIFICATION

xto10x Hackathon Edition #3 – Masai School • [Link](#)

- Developed Financial Time Machine, a market forecasting tool using LSTM and Python.
- Simulated future investment trends with interactive charts.
- Recognized for innovation and data-driven decision-making.
