

SHUBHAM KUMAR SHIVAM

AI / ML Engineer (Fresher) • NLP • Computer Vision • Applied ML
Bangalore, Karnataka | +91 8227053870 | skshivam771@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

AI/ML fresher with hands-on, end-to-end project experience across NLP, Computer Vision, and tabular data — from building a GPT-style Transformer from scratch to deploying production ML APIs on Render and Railway. Comfortable owning the full pipeline: data cleaning, model selection, class-imbalance handling (SMOTE), and shipping working products used by real users. Seeking an AI/ML Engineer, Data Analyst, or Data Scientist role to apply this foundation at scale.

SKILLS

Language: Python, SQL
ML / DL: PyTorch, TensorFlow, scikit-learn, XGBoost, SMOTE, Pandas, NumPy
NLP & CV: spaCy, NLTK, OpenCV, Transformers (HuggingFace), TF-IDF
Deployment & Tools: Flask, Django, Render, Railway, Docker (basic), Git/GitHub

PROJECTS

WriteFusion AI | *Python · TensorFlow · Flask · NLP · Transformers* [Live](#) | [GitHub](#)

- **Built a GPT-style decoder-only Transformer language model from scratch** (causal self-attention, 2 layers, 4 heads, 3.4M parameters), trained on a self-cleaned 2.7M-word, 860K-sentence English corpus.
- **Architected and deployed a production Flask REST API** (Gunicorn + Render) serving real-time next-word prediction, multi-strategy text generation, and perplexity scoring.
- **Built a full interactive frontend from scratch** — live ghost-text prediction, attention-weight visualization, and 8 configurable decoding strategies — owning the pipeline end-to-end from data to deployed product.

MindScan — Teen Depression Risk Predictor | *Python · Django · XGBoost · SMOTE · scikit-learn* [Live](#) | [GitHub](#)

- **Solved severe class imbalance** (~2.6% positive rate across 1,200 records) using SMOTE, optimizing for Recall and F1 over raw accuracy — critical for clinical-style ML.
- **Benchmarked Logistic Regression, Random Forest, and XGBoost**; selected XGBoost for the strongest F1 score on the minority class.
- **Deployed to production on Railway** with real-time inference and personalized risk recommendations.

AI Symptom Checker | *Python · Flask · scikit-learn · NLP* [Live](#) | [GitHub](#)

- **Developed a disease-prediction app achieving 92% accuracy** on benchmark data.
- Deployed the Flask app and validated it in real-world use with **100+ users** for real-time predictions.
- **Designed a responsive UI that cut average query time by 40%.**

WORK EXPERIENCE

AI & ML Intern — *ElevateLab* Apr 2025 – May 2025 | [Certificate](#)

- Developed and deployed end-to-end Machine Learning solutions using Python, Flask, scikit-learn, and TensorFlow, taking models from prototype to integration.
- Built and evaluated ML models with data preprocessing and feature engineering to improve model reliability on real-world data.
- Integrated trained AI models into web applications to deliver real-time predictions and production-ready solutions.

EDUCATION

Major Certification in Artificial Intelligence — IIT Ropar — *in collaboration with Masai, NSDC* Aug 2024 – Feb 2026 | [View Certificate](#)

- Certificate Ref. No. IITRPRAI-CC0894 — issued by IIT Ropar, covering core AI/ML foundations.

CERTIFICATIONS

- xto10x Hackathon Edition #3 – Masai School — [View Certificate](#)
- **Built AI in Personalized Learning**, a RAG-based learning assistant that retrieves relevant study material from a custom knowledge base to answer learner queries with context-grounded accuracy.
- Designed the retrieval pipeline using embeddings and Python to dynamically tailor explanations and recommendations to each learner's pace and level.
- Recognized for innovation and data-driven decision-making.
